

## **Chung-Hsiung Sui, National Taiwan University**

Dr. Sui is currently a distinguished professor at the Department of Atmospheric Sciences, National Taiwan University. His research has generally focused on the convective systems Interacting with tropical climate oscillations. He has published almost 80 refereed papers in international journals with a H-index of 30. His research group is currently working on two research topics. One is to identify changes of cloud/rain and associated hydrologic processes in east Asia and neighboring warm oceans in response to climate warming. The other is about dynamics of tropical waves and climate oscillations.
